IDEAS FOR A BRIGHTER FUTURE

www.gogreenlightsolutions.com

Advantages to replacing Fluorescent T12 bulbs with magnetic ballast with T8 bulbs and electronic ballast:

1. Energy Savings \$27.00 to \$40.00 per fixture a year.
2. T8 fixtures have light more like sunlight, closer to full spectrum light.
3. Overall lower operating temperatures extend ballast life and reduce air conditioning costs.
4. T8 electronic ballasts are quieter than T12's.
5. Fluorescent T8's do not flicker or buzz for less eyestrain and more comfort.

Why should you replace lights all at once and why now?

1. There is significant energy money savings involved in doing so and most places find that their investment per fixture with us is less than cost of purchasing the parts themselves.
2. The CCW&L, EDE&C, CIM or KCP&L rebate in most instances pays half of the initial investment, but is only cost effective if you are replacing a number of fixtures at one time.
3. Our average charge to retrofit most fixtures is 20.00 (varies depends on who your local utility company is) after rebate, this is less than most business would spend purchasing just the ballast and bulbs.
4. We provide a 5-year warranty on our ballast.
5. We also provide a 2-year warranty on our bulbs.
